Bortezomib

Bortezomib (Velcade®)

About This Drug

Bortezomib is used to treat cancer. It is given in the vein (IV) or by a shot under the skin (subcutaneously).

Possible Side Effects

- Bone marrow depression. Decrease in the number of white blood cells, red blood cells, and platelets. This may raise your risk of infection, make you tired and weak (fatigue), and raise your risk of bleeding.
- Nausea and vomiting (throwing up)
- Decreased appetite (decreased hunger)
- Constipation (not able to move bowels)
- Loose bowel movements (diarrhea)
- Neuropathy. Effects on the nerves are called peripheral neuropathy. You may feel numbness, tingling, or pain in your hands and feet. It may be hard for you to button your clothes, open jars, or walk as usual. The effect on the nerves may get worse with more doses of the drug. These effects get better in some people after the drug is stopped but it does not get better in all people.
- Tiredness
- Rash
- Fever

Note: Each of the side effects above was reported in 20% or greater of patients treated with bortezomib. Not all possible side effects are included above.

Warnings and Precautions

- Low blood pressure. Your doctor will check your blood pressure as needed.
- Congestive heart failure. You may be short of breath. Your arms, hands, legs and feet may swell.
- Inflammation (swelling) of the lungs. You may have a dry cough or trouble breathing.
• A partial or complete blockage of your small and/or large intestine.
• Changes in your central nervous system can happen. The central nervous system is made up of your brain and spinal cord. You could feel extreme tiredness, agitation, confusion, hallucinations (see or hear things that are not there), trouble understanding or speaking, loss of control of your bowels or bladder, eyesight changes, numbness or lack of strength to your arms, legs, face, or body, and coma. If you start to have any of these symptoms let your doctor know right away.
• Tumor lysis: This drug may act on the cancer cells very quickly. This may affect how your kidneys work. Your doctor will monitor your kidney function.
• Changes in your liver function. Your liver function will be checked as needed.

Important Information

• This drug may be present in the saliva, tears, sweat, urine, stool, vomit, semen, and vaginal secretions. Talk to your doctor and/or your nurse about the necessary precautions to take during this time.
• This drug may impair your ability to drive or use machinery. Use caution and tell your nurse or doctor if you feel dizzy, very sleepy, and/or experience low blood pressure.

Treating Side Effects

• Manage tiredness by pacing your activities for the day.
• Be sure to include periods of rest between energy-draining activities.
• Wash your hands regularly.
• Avoid close contact with people who have a cold, the flu, or other infections.
• Use a soft toothbrush. Check with your nurse before using dental floss.
• Be very careful when using knives or tools.
• Use an electric shaver instead of a razor.
• Ask your doctor or nurse about medicines that are available to help stop or lessen constipation.
• If you are not able to move your bowels, check with your doctor or nurse before you use enemas, laxatives, or suppositories.
• Drink plenty of fluids (a minimum of eight glasses per day is recommended).
• If you throw up or have loose bowel movements, you should drink more fluids so that you do not become dehydrated (lack water in the body from losing too much fluid).
• If you get diarrhea, eat low-fiber foods that are high in protein and calories and avoid foods that can irritate your digestive tracts or lead to cramping.
• Ask your nurse or doctor about medicine that can lessen or stop your diarrhea.
• To help with nausea and vomiting, eat small, frequent meals instead of three large meals a day. Choose foods and drinks that are at room temperature. Ask your nurse or doctor about other helpful tips and medicine that is available to help or stop lessen these symptoms.
• To help with decreased appetite, eat small, frequent meals.
• Eat high caloric food such as pudding, ice cream, yogurt and milkshakes.
• If you have numbness and tingling in your hands and feet, be careful when cooking, walking, and handling sharp objects and hot liquids.
• If you get a rash do not put anything on it unless your doctor or nurse says you may. Keep the area around the rash clean and dry. Ask your doctor for medicine if your rash bothers you.
• Signs of tumor lysis: Confusion or agitation, decreased urine, nausea/vomiting, diarrhea, muscle cramping, numbness and/or tingling, seizures.

Food and Drug Interactions

• There are no known interactions of bortezomib with food.
• Check with your doctor or pharmacist about all other prescription medicines and dietary supplements you are taking before starting this medicine as there are a lot of known drug interactions with bortezemib. Also, check with your doctor or pharmacist before starting any new prescription or over-the-counter medicines, or dietary supplement to make sure that there are no interactions.
• Avoid the use of St. John’s Wort with bortezomib as this may lower the levels of the drug in your body, which can make it less effective.

When to Call the Doctor

Call your doctor or nurse if you have any of these symptoms and/or any new or unusual symptoms:

• Fever of 100.5 F (38 C) or higher
• Chills
• Fatigue that interferes with your daily activities
• Feeling dizzy or lightheaded
• Feeling that your heart is beating in a fast or not normal way (palpitations)
• Trouble breathing
• Swelling of legs, ankles, or feet
• Weight gain of 5 pounds in one week (fluid retention)
• Easy bleeding or bruising
• Confusion and/or agitation
• Hallucinations
• Trouble understanding or speaking
• Blurry vision or changes in your eyesight
• Numbness or lack of strength to your arms, legs, face, or body
• No bowel movement in 3 days or when you feel uncomfortable.
• Abdominal pain that does not go away
• Loose bowel movements (diarrhea) 4 times a day or loose bowel movements with lack of strength or a feeling of being dizzy
• Nausea that stops you from eating or drinking and/or is not relieved by prescribed medicines
• Throwing up more than 3 times a day
• Numbness, tingling, or pain your hands and feet
• New rash and/or itching
• Rash that is not relieved by prescribed medicines
• Lasting loss of appetite or rapid weight loss of five pounds in a week
• Signs of tumor lysis: Confusion or agitation, decreased urine, nausea/vomiting, diarrhea, muscle cramping, numbness and/or tingling, seizures.
• Signs of possible liver problems: dark urine, pale bowel movements, bad stomach pain, feeling very tired and weak, unusual itching, or yellowing of the eyes or skin
• If you think you are pregnant or may have impregnated your partner

Reproduction Warnings

• Pregnancy warning: This drug can have harmful effects on the unborn baby. Women of child bearing potential should use effective methods of birth control during your cancer treatment and for at least 2 months after treatment. Men with female partners of child bearing potential should use effective methods of birth control during your cancer treatment and for at least 2 months after your cancer treatment. Let your doctor know right away if you think you may be pregnant or may have impregnated your partner.
• Breastfeeding warning: Women should not breast feed during treatment and for at least 2 months after treatment because this drug could enter the breast milk and cause harm to a breast feeding baby.
• Fertility warning: In men and women both, this drug may affect your ability to have children in the future. Talk with your doctor or nurse if you plan to have children. Ask for information on sperm or egg banking.
